Business Process Transformation Solutions from SAP

Secure Your Competitive Edge with Business Process Transformation

THE BEST RUN 

Summary

For modern organizations, transformation is a constant requirement, and agility a critical success factor. Since business processes are what make a company function, process optimization is the heart of any transformation effort. The business process transformation portfolio from SAP helps you prioritize effective process improvements based on data, not guesswork, to streamline operations, reduce costs, improve customer experience, and more.

Objectives

- Understand, improve, and transform your organization's business processes at scale
- Accelerate your journey to digital transformation, operational excellence, and customer centricity
- Make continuous process transformation a source of sustained competitive advantage

Solution

- Process analysis and mining with prebuilt process flows and automated improvement recommendations
- Process simulation and modeling for data-driven decision-making
- Process and journey management with integrated operational and experience data
- Centralized and collaborative documentation, including 360-degree process views with linked analysis

Benefits

- Decrease time to market through process optimization
- Improve prioritization of transformation efforts
- Boost customer retention due to better customer experience
- Accelerate change management through alignment across teams

SAP Information Sheet

SAP Signavio Process Transformation Suite, part of the business process transformation portfolio of SAP, combines process analysis and mining with process and journey modeling. You gain a clear understanding of how your organization's processes function and where they can be improved.

With benchmarking across entire industries, business units, and systems, automated process recommendations from the suite help you select the most effective process improvements. Process simulation tools let you evaluate any changes before implementation.

This enables a data-driven approach to change, which can increase your confidence in decision-making and prioritization and significantly de-risk business process transformation efforts.

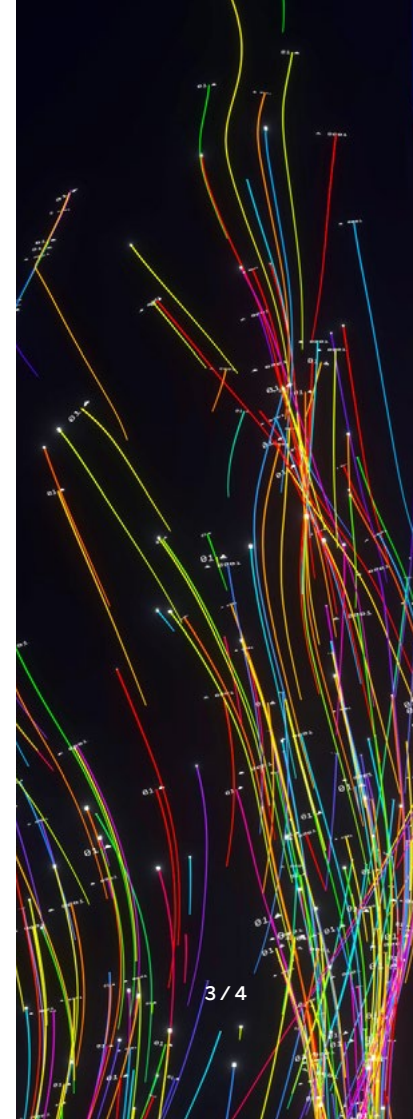

Quick Facts

Business process transformation solutions can reduce both time to insight and time to adapt; see the figure on the next page.

Combining outside-in and inside-out perspectives to translate customer, supplier, and employee experience to your operational reality enhances customer satisfaction and employee alignment. A shared process framework means employees can more easily model, govern, share, and collaborate on processes and actions.

With oversight and communication made possible by SAP Signavio collaboration solutions, employees can identify further process improvements and implement recommended actions swiftly, driving continuous improvement. This embeds flexibility into your processes and helps ensure that business process transformation becomes a source of sustained competitive advantage – no matter how the world changes.
